Ploidy ST numerical diagnostics: N resolution at fixed M=4
Five key parameters; five phases; 201 O2 points (0-5%)
A N4097/M4 phase range
B N8193/M4 phase range
C Absolute mean difference

Cells show p90 of the diagnostic, not ST. Grey: p90 and maximum pass; blue *: p90 passes, local maximum fails; orange: p90 fails.
Phase-range threshold 0.10; mean-difference threshold 0.05. Full phase ranges are not confidence intervals.
