

Separate in-vivo numerical-search performance

Optimizer starts are numerical endpoints, not posterior draws, confidence intervals, or biological replicates

A

In-vivo objective landscape

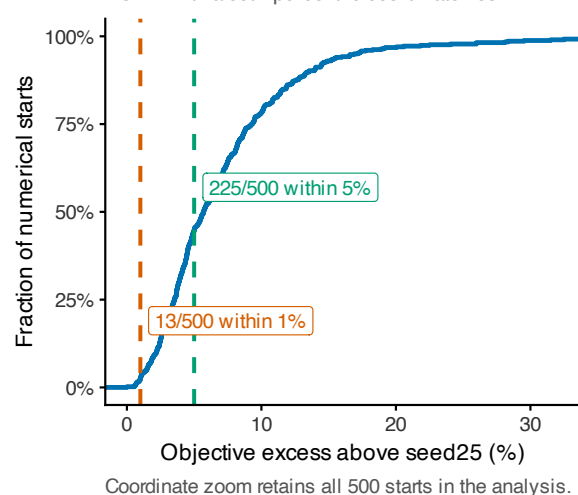

seed25 is the lowest retained objective among 500 starts

B

Near-optimal solution multiplicity

ECDF with a 99th-percentile coordinate zoom

C

Optimizer diagnostics

Flags and codes describe numerical stopping, not global convergence

Starts	500
DEoptim flag	500/500
Stop reason	early_stop_reltol_or_steptol (500)
Iterations	29--489/1000
Local accepted	460/500
Local codes	0 (281); 52 (219)
Selected seed	seed25; local accepted; code 0
Selected bounds	1/20 active parameters

D

Boundary dependence

Exact active-bound counts across 500 starts
