500 neighborhoods: first, total and focal second-order sensitivity | N4096, five repeats, 201 oxygen points
Same metric/output uses identical color limits across scopes; outputs and metrics have separate scales.

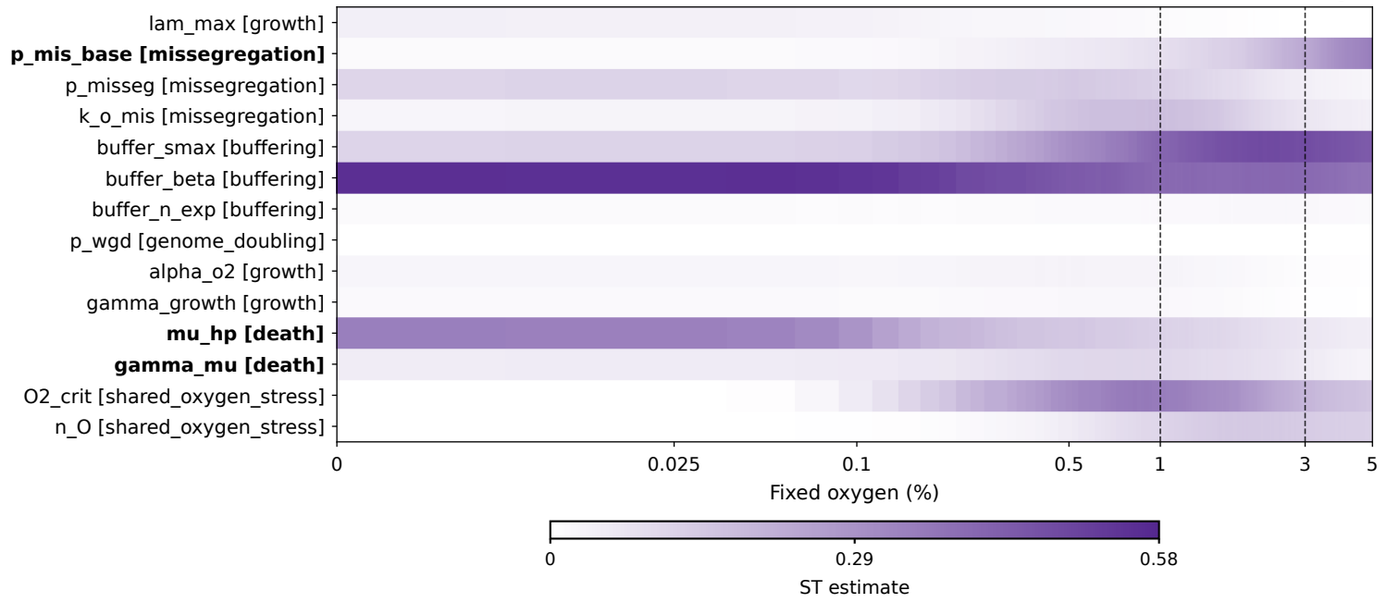

A 500 neighborhoods | S1
Dominant mean ploidy

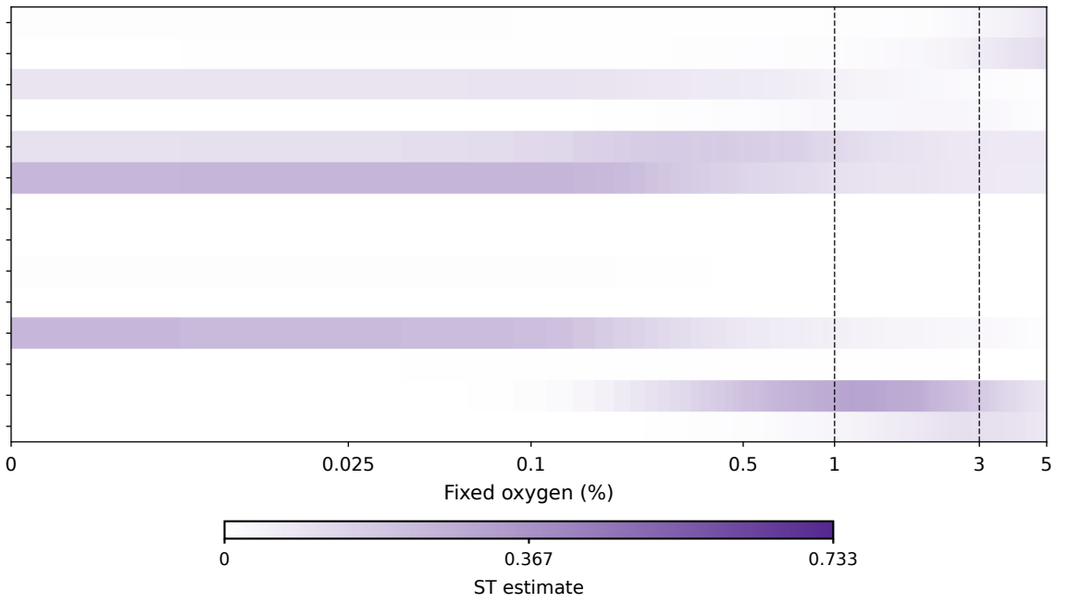

B 500 neighborhoods | S1
Net live-cell growth rate

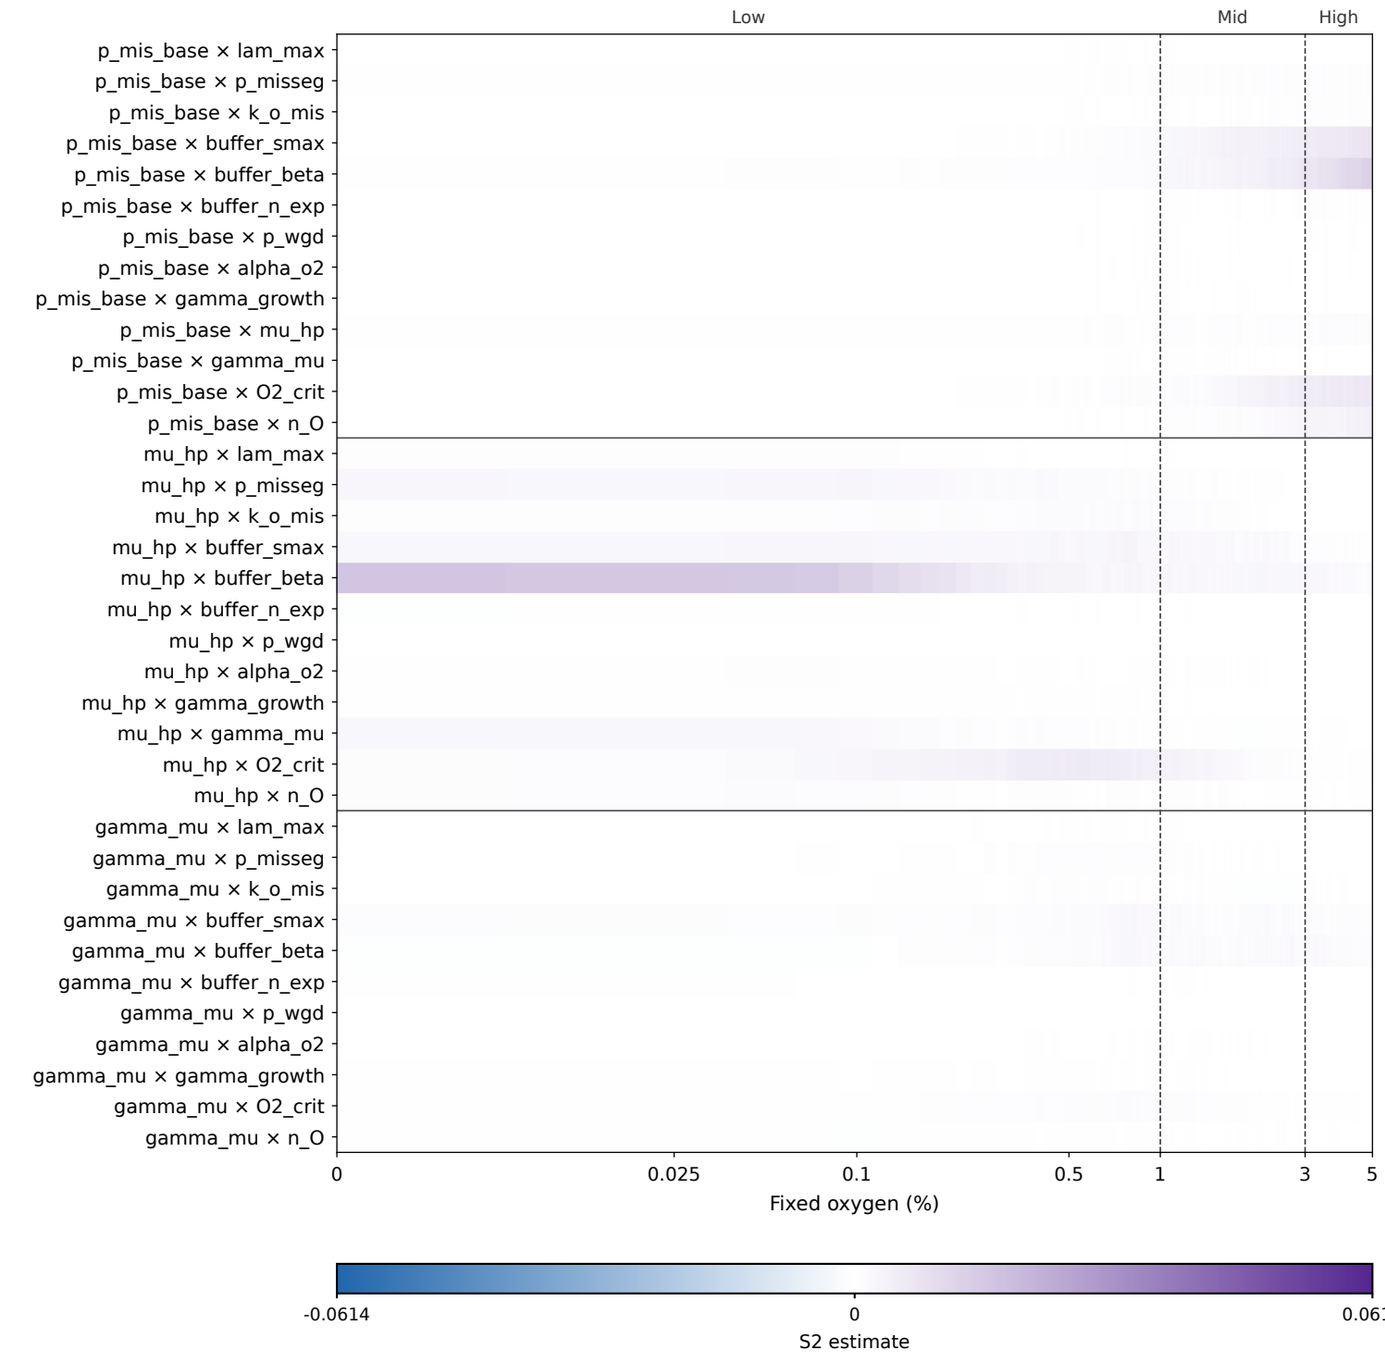

C 500 neighborhoods | ST
Dominant mean ploidy

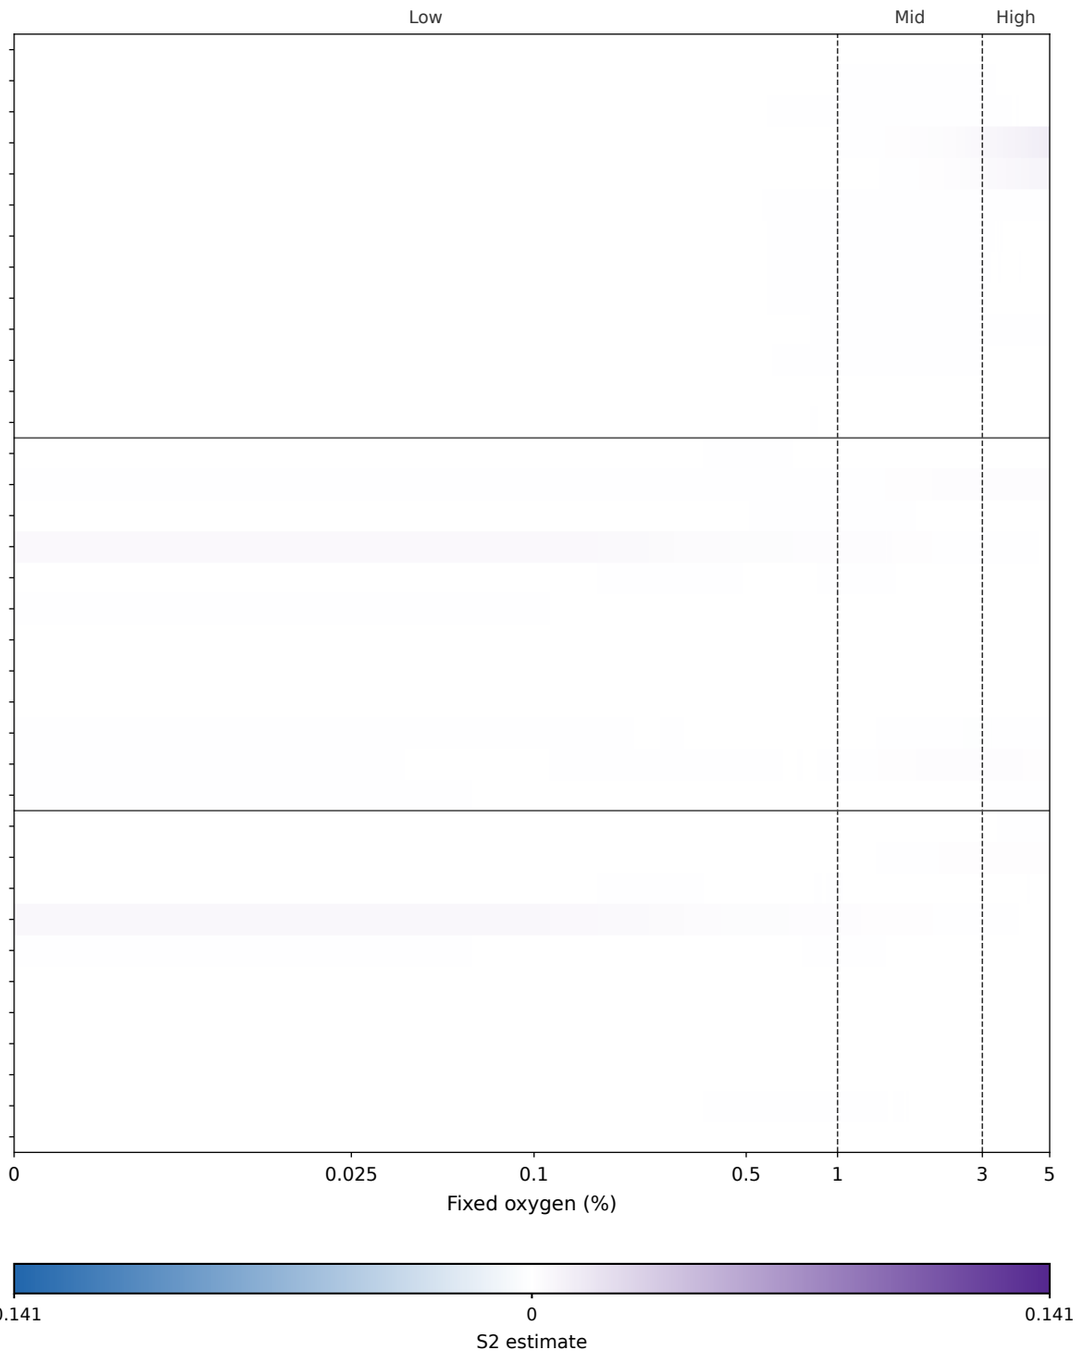

D 500 neighborhoods | ST
Net live-cell growth rate

E 500 neighborhoods | S2: 36 focal pairs
Dominant mean ploidy

F 500 neighborhoods | S2: 36 focal pairs
Net live-cell growth rate

Global = five-repeat mean; neighborhoods = median of 500 five-repeat means. No convergence exclusions.
Purple = positive estimate; blue = negative sampling estimate (not antagonism); gray = undefined. Dashed lines: 1% and 3% O_2.
O_2: $\log_{10}$ above 0.025%; linear from 0 to 0.025% to retain zero. Low: 0–1%; intermediate: >1–<3%; high: 3–5%.
