Focal S2: six pairs per output with the largest N131072 peak

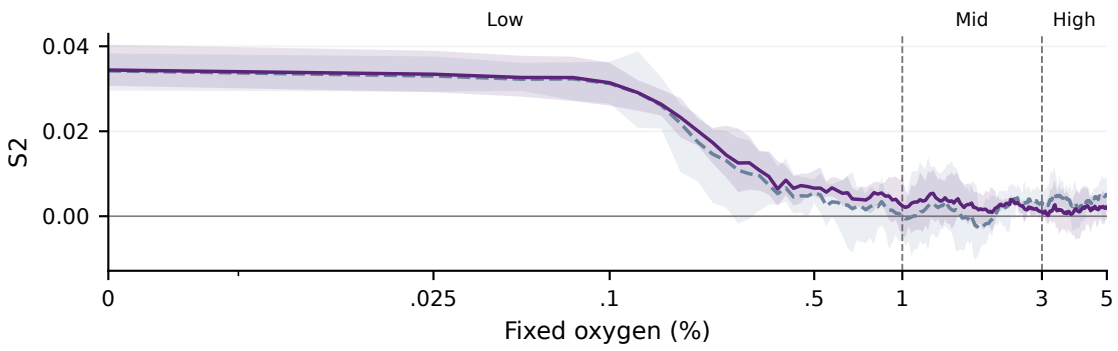

N=65536 N=131072

Ploidy

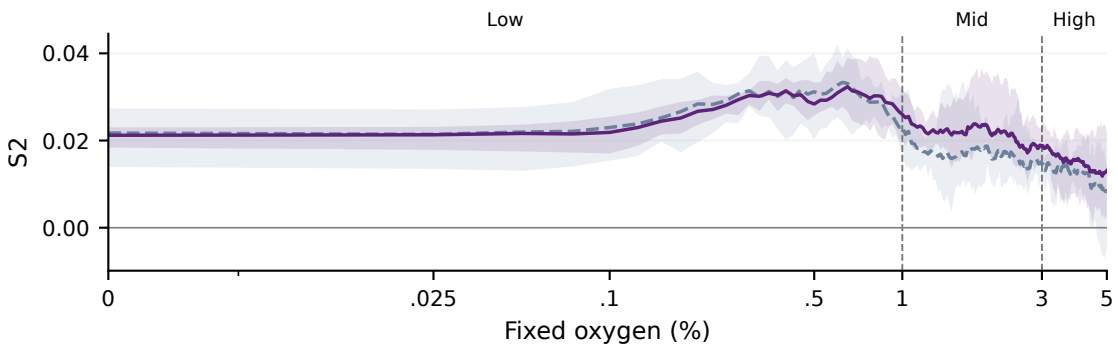

p_misseg x mu_hp

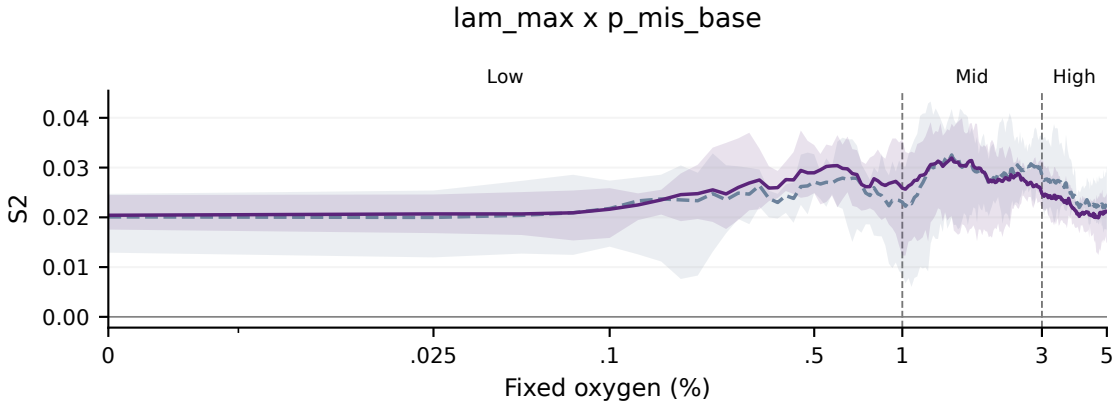

lam_max x mu_hp

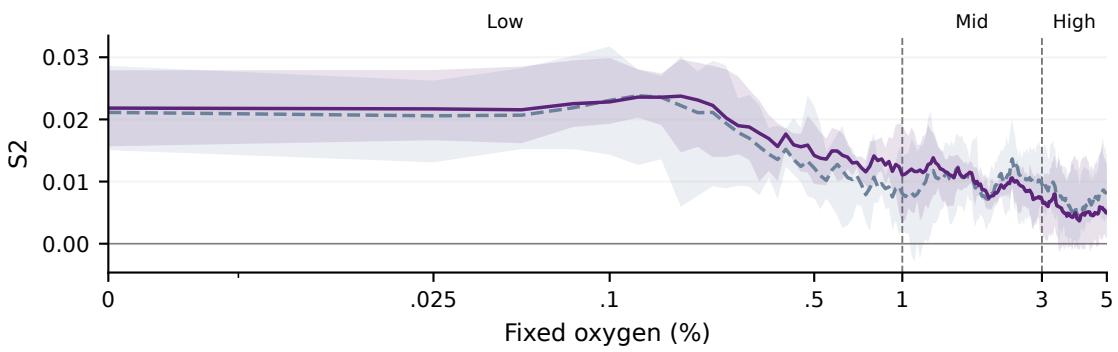

p_mis_base x mu_hp

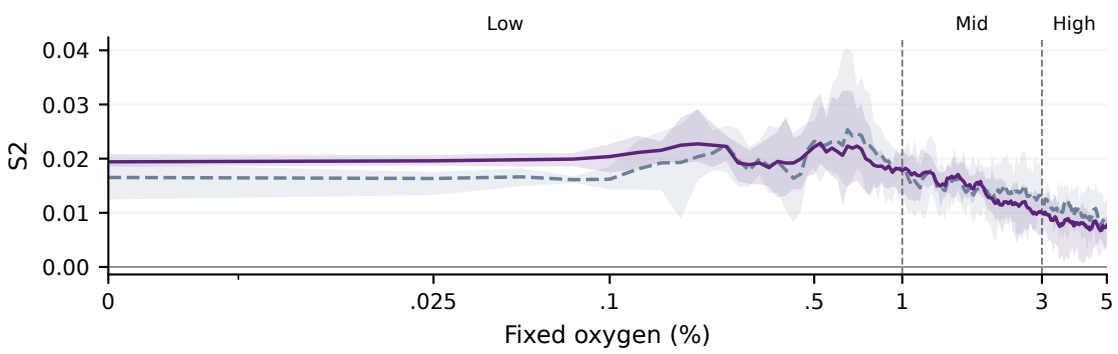

lam_max x p_mis_base

lam_max x gamma_mu

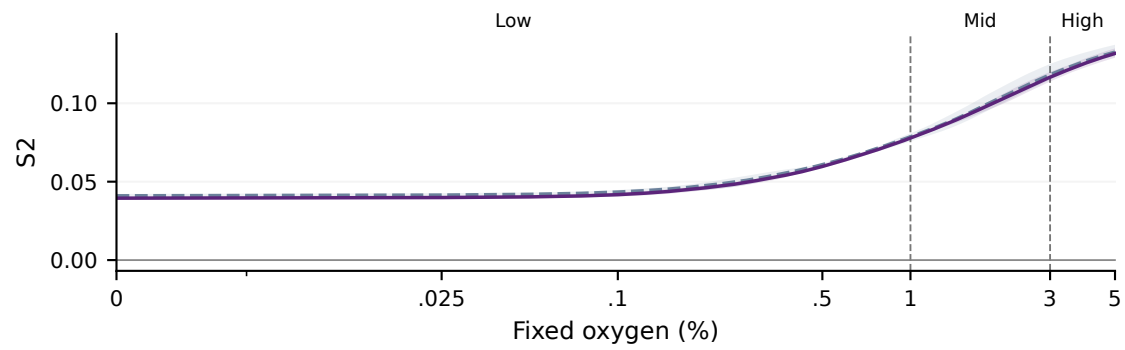

p_misseg x gamma_mu

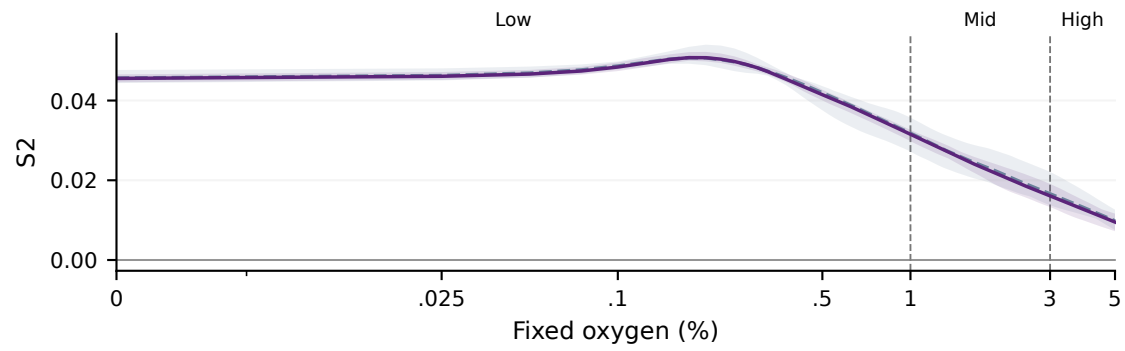

Net live-cell growth rate

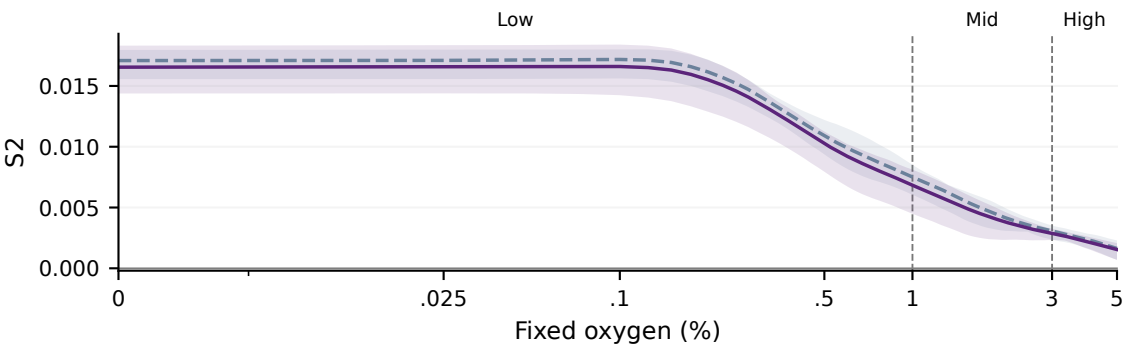

lam_max x p_mis_base

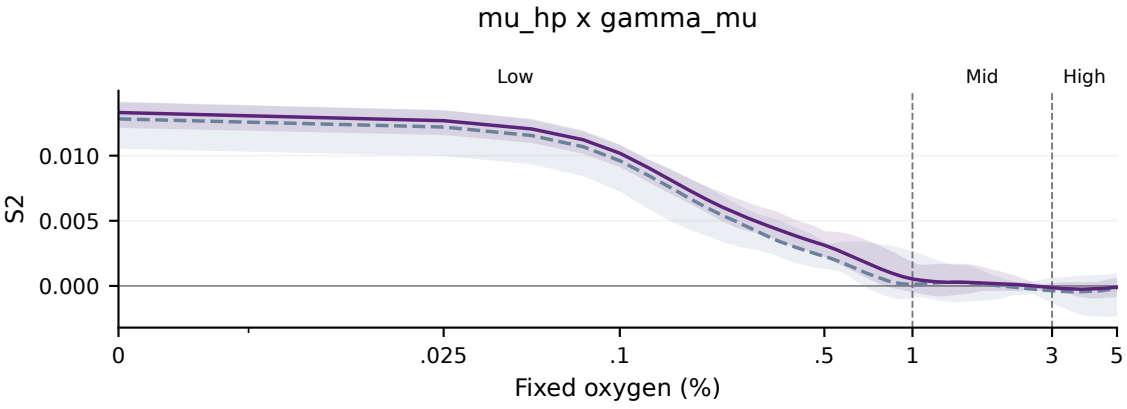

lam_max x mu_hp

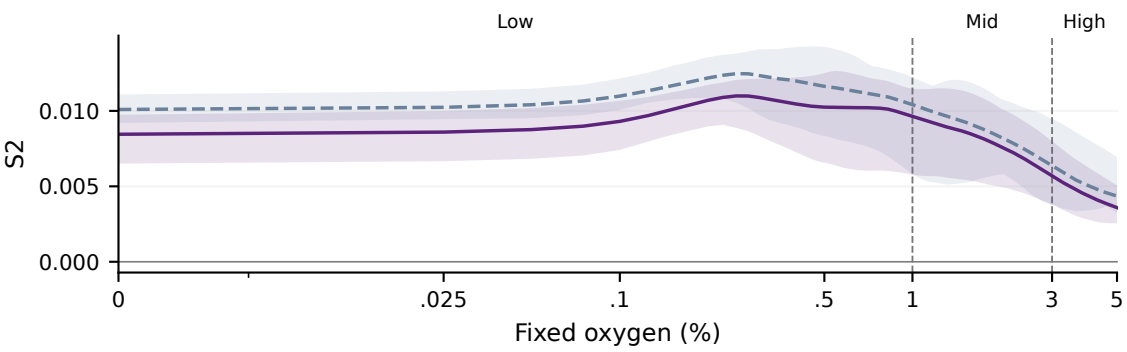

p_mis_base x p_misseg

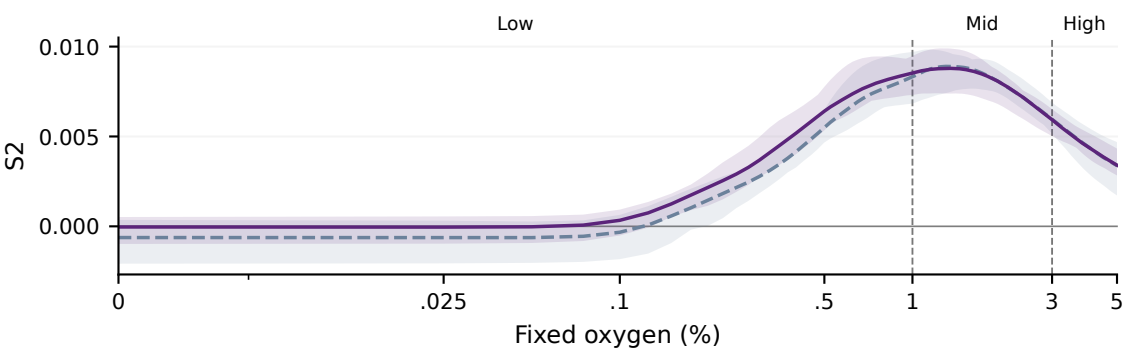

mu_hp x gamma_mu

p_misseg x mu_hp

mu_hp x O2_crit

Selection: descending maximum five-repeat mean S2 over 201 oxygen levels, separately for each output.
All 36 pairs are in the appendix. Bands: five-repeat min-max, not CIs. Negative estimates: sampling noise.
Each panel has its own y scale; both N values share that scale. Oxygen boundaries: 1% and 3%.
